

Infectious Disease Notifications in Ireland, 2015 - 2018

Figures are provisional for: 2018

Figures may differ from those previously published, due to ongoing updating of notification data on CIDR. These figures were extracted from the Computerised Infectious Disease Reporting (CIDR) System on: 19/01/2022

Figures for the EARS-Net pathogens (Escherichia coli, Enterococci, Klebsiella pneumoniae, Pseudomonas aeruginosa and Staphylococcus aureus) and certain sexually transmitted infections (specifically, ano-genital warts and non-specific urethritis) are not provided here, as these diseases were not notified via the CIDR system during the above period.

NA: Indicates that data for the diseases and years indicated above are not available in CIDR.

^ Since 17/03/2013 events of Chlamydia trachomatis infection (genital), Noroviral infection, Respiratory syncytial virus infection & Rotavirus infection created by HSE East are 'fast-tracked' & refer to notifications rather than patients.

COVID-19 became notifiable on 20/02/2020

*Since the signing into law of the Infectious Disease (Amendment) Regulations 2018 on 18th December 2018, both suspected and confirmed cases of CJD and vCJD are notifiable; prior to this only confirmed cases were notifiable

** The case definition for syphilis changed on 01/01/2014 and from this date, syphilis notifications include early (infectious) syphilis only. Updates to laboratory criteria in July 2016 increased the sensitivity of the reporting system. The case definition was further refined in Jan. 2019 to include probable cases

** Streptococcus pneumoniae infection (invasive) figures relate to confirmed cases only since 1st July, 2015.

Hepatitis E became notifiable on the 15/12/2015.

† Zika virus infection became notifiable on the 23/05/2016.

For more information on notifiable infectious diseases please see HPSC's Case Definitions document available at <http://www.hpsc.ie>
