

## Epidemiology of COVID-19 Outbreaks/Clusters in Ireland - Weekly Report. Week 40, 2022

**Weekly COVID-19 Outbreak Report for week ending 08/10/2022**

**Prepared by HPSC on 12/10/2022**

**Please note: Data are provisional**

This report includes data extracted from the Computerised Infectious Disease Reporting (CIDR) on 12/10/2022 up to midnight 08/10/2022.

*Reference dates:*

<b>Waves</b>	<b>Dates</b>
Wave 1 (Week 10 – 31 2020)	01/03/2020 – 01/08/2020
Wave 2 (Week 32 – 47 2020)	02/08/2020 – 21/11/2020
Wave 3 (Week 48 2020 – Week 25 2021)	22/11/2020 – 26/06/2021
Wave 4 (Week 26 – 50 2021)	27/06/2021 – 18/12/2021
Wave 5 (Week 51 2021 onwards)	19/12/2021 onwards

The HPSC Epidemiology of COVID-19 Data Hub provides data on non-private household outbreaks. The [Data Hub](#) is updated weekly on Wednesdays.

**Regional Departments of Public Health are currently prioritising the investigation and reporting of outbreaks in settings that benefit most from public health and clinical intervention. These settings include acute hospitals, nursing homes, community hospital/long-stay units, residential institutions, other healthcare settings and vulnerable populations. For this reason, outbreaks in other settings may be underestimated. This report focuses on these key settings/groups.**

In addition, due to the surge in case numbers in early 2022 and changes in testing policy, all outbreak cases may not be linked to their outbreak on CIDR. Due to these changes, an interim measure has been applied whereby the higher number between aggregate and outbreak linked confirmed case numbers is used in outbreak settings (report pages 9-19).

Due to the cyber-attack on the HSE IT systems on 14/05/2021, CIDR was unavailable for the reporting of COVID-19 outbreaks from 14/05/2021 to the 28/06/2021. As a result, there has been a delay in reporting for many outbreaks on CIDR. To account for this, outbreak week for all outbreaks created between May 14<sup>th</sup> and October 9<sup>th</sup> 2021 is based on the following algorithm: earliest of 1. outbreak recognition date; 2. first reported date; 3. outbreak created date. Outbreak week is based on outbreak created date for all outbreaks created on or before May 13<sup>th</sup> 2021, and on or after October 10<sup>th</sup> 2021.

Please note COVID-19 outbreaks and cases are continuously validated/updated on CIDR.

The COVID-19 outbreak definition is available in [Appendix 2](#) of this report and on the [HPSC website](#).

Sincere thanks are extended to all those who are participating in the collection of data and reporting of data used in these reports. This includes the HSE COVID-19 Contact Management Programme (CMP), staff in ICU units, notifying clinicians, laboratory staff, public health doctors, nurses, surveillance scientists, microbiologists and administrative staff.

## Key points

**24,693** COVID-19 outbreaks have been reported in Ireland since Week 10, 2020 (Figure 1, [Appendix 1](#)).

### Summary Wave 5 (Week 51 2021 to Week 40 2022)

**3,388** COVID-19 outbreaks have been reported from Week 51 2021 onwards and key outbreak locations are as follows:

- 617 (18.2%) were reported in hospitals
- 970 (28.6%) were reported in nursing homes
- 145 (4.3%) were reported in community hospital/long-stay units
- 1046 (30.9%) were reported in residential institutions
- 222 (6.6%) were reported in 'other' healthcare services
- 388 (11.4%) were reported in a range of other settings

**3,263** outbreaks have been closed and **125** are open (See [Appendix 1](#), Table A for breakdown of outbreaks by location and outbreak status. Note that it is common practice not to close private house outbreaks on CIDR due to the large volume of outbreaks in this category).

### Summary Week 40 2022

In **Week 40** 2022, there were **44** COVID-19 outbreaks notified.

The overall number of outbreaks notified in Week 40 2022 decreased by 11 compared to Week 39 2022. There were:

- 10 outbreaks associated with acute hospitals notified
- 21 outbreaks associated with nursing homes notified
- 12 outbreaks associated with residential institutions notified
- 1 outbreak associated with other healthcare services notified

## COVID-19 Outbreaks/Clusters in Residential Facilities and Hospital settings in Ireland

A summary of COVID-19 outbreaks linked to nursing homes, acute hospitals, community hospital/long-stay units, and other residential institutions is shown in Figure 2 and in the subsequent “Focus” sections, Tables 3-5 and Figures 3-5.

## Appendix 2

### Technical Notes

1. Data are based on statutory notifications and were extracted from the National Computerised Infectious Disease Reporting (CIDR) system. Data are provisional and subject to ongoing review, validation and update. As a result, figures in this report may differ from previously published figures.
2. For surveillance purposes, the following COVID-19 outbreak definition is used for notifying **Confirmed**<sup>3</sup> COVID-19 outbreaks/clusters:
  - There is a cluster/outbreak, with two or more cases of laboratory confirmed COVID-19 infection regardless of symptom status. This includes cases with symptoms and cases who are asymptomatic.OR
  - There is a cluster/outbreak, with two or more cases of illness with symptoms consistent with COVID-19 infection (as per the COVID-19 case definition), and at least one person is a confirmed case of COVID-19.
3. This report includes confirmed and suspected COVID-19 outbreaks.
4. An “Open” or “Closed” outbreak is defined as an outbreak where the outbreak status is “Open” or “Closed” on CIDR. In order to declare an outbreak “Closed” the outbreak location should not have experienced any new cases of infection which meet the case definition for a period of 28 days (two incubation periods).
5. Outbreak type (family/general) indicates whether an outbreak is confined to a family (family outbreak) or affects members of more than one household (general outbreak).
6. The “range in number of cases” presented in Tables 3 to 8 is based on laboratory confirmed cases linked to an outbreak in CIDR. The priority is to notify outbreaks to CIDR in a timely fashion and, while every effort is made to link cases to outbreaks as quickly as possible, there can sometimes be a delay in linking cases to the outbreak. Ranges in number of cases that include “0” include outbreaks that currently have no linked cases. Data in CIDR are continuously reviewed and updated and this includes the identification and linking of outbreak-associated cases.

---

<sup>3</sup> From September 21<sup>st</sup> 2020, suspected COVID outbreaks should be reported with the disease category ‘Acute Respiratory Infection (ARI)’. If one or more cases linked to the outbreak are subsequently confirmed as COVID-19, the ARI outbreak should be reclassified to being a COVID-19 outbreak. Outbreaks of suspected COVID-19 which were notified before September 21<sup>st</sup> 2020, and met the previous COVID-19 outbreak definition should remain as COVID-19 outbreaks on CIDR. The COVID-19 case definition is detailed on the [HPSC website](#)
