

# Epidemiology of COVID-19 in Ireland - 14 day report

Report prepared by HPSC on 07/10/2020

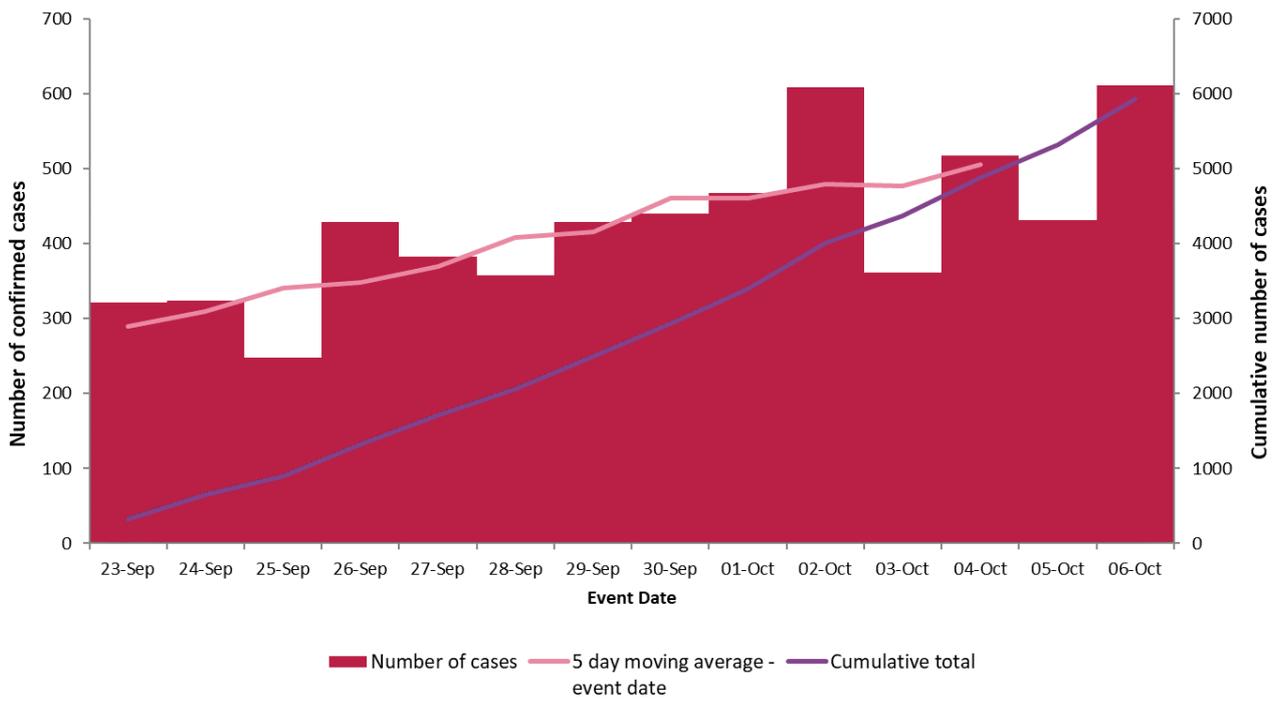

Summary characteristics of confirmed COVID-19 cases notified in Ireland from 23/09/2020 up to midnight 06/10/2020

	Number	Percent
Total number of confirmed cases	5,925	
National incidence of confirmed cases per 100,000 population	124.43	
Number of cases hospitalised*	175	2.95
Number of cases admitted to ICU*	8	0.14
Number of deaths among confirmed cases	9	0.15
Case fatality ratio (CFR, %)	0.15	
National incidence of confirmed deaths per 100,000 population	0.19	
Number of cases** associated with clusters	2,641	44.57
Number of imported cases	13	0.22
Number of cases in healthcare workers	397	6.7
Males	2,964	50.03
Females	2,949	49.77
M:F ratio	1.01	
Median age (years)	33	
Mean age (years)	37	
Age range (years)	0 - 98	

\* The number of cases hospitalised and admitted to ICU relate only to events notified in the last 14 days and do not include cases notified prior to this and admitted to hospital or ICU in the last 14 days

\*\*Cases may be associated with outbreaks notified outside the timeframe of this report  
23/09/2020 - 06/10/2020

Note: Data were extracted from Computerised Infectious Disease Reporting (CIDR) system at 13:21 on 07/10/2020 and are provisional and subject to ongoing review, validation and update. As a result, figures in this report may differ from previously published figures.

Please do not directly compare county shades to previous maps. The numbers of cases by county are increasing and as such the categories listed will broaden which may result in changes to the map shading.

**Table 5: Number and incidence of confirmed COVID-19 cases by Dublin Local Health Offices (LHOs) notified from 23/09/2020 to midnight 06/10/2020**

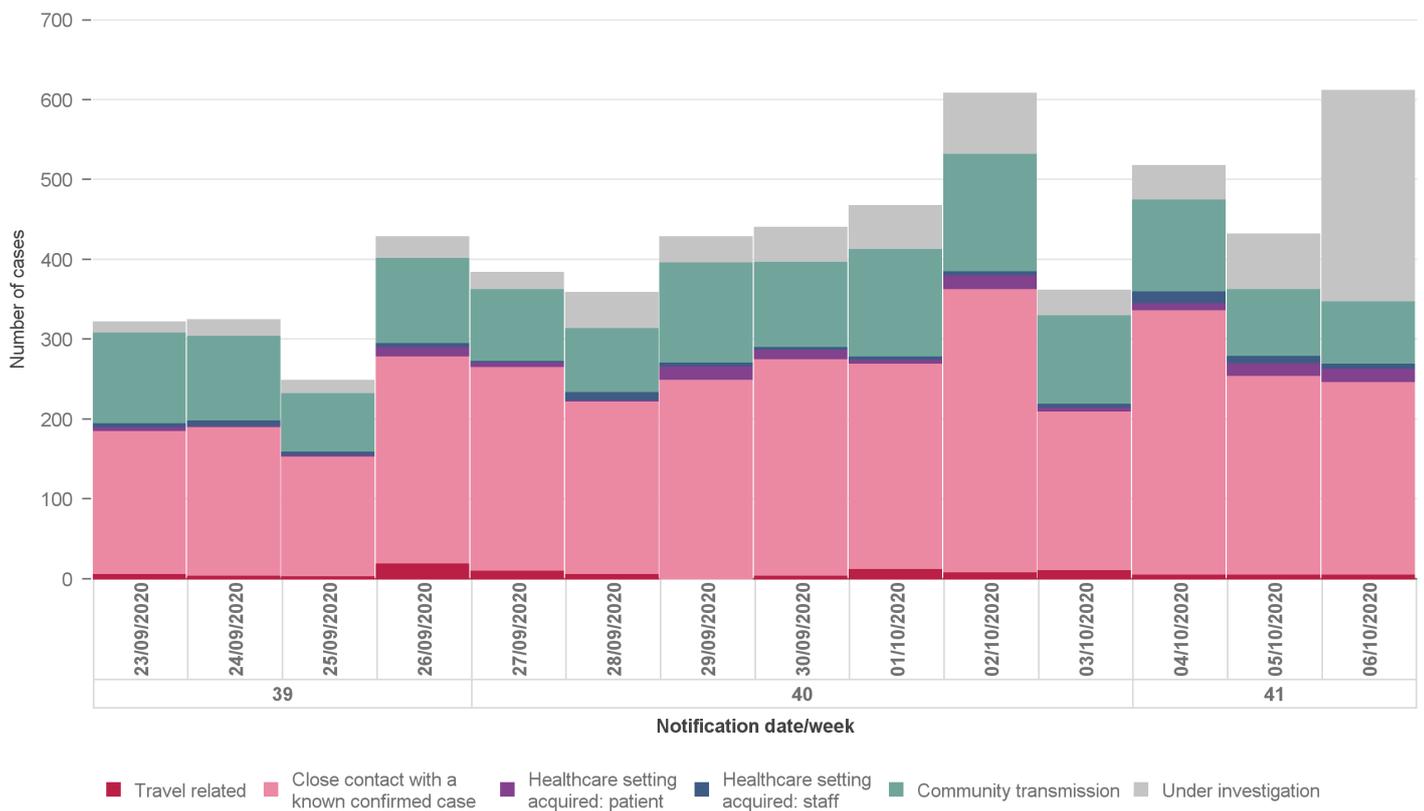

CCA	Local Health Office	Number of cases in past 14 days based on event date	14 day incidence rates based on event dates
CCA1	Dublin South	135	99.2
CCA2	Dublin South East	287	232.0
CCA3	Dublin South City	180	120.1
CCA4	Dublin South West	255	158.5
CCA5	Dublin West	275	177.0

Note: Local health offices (LHOs) came into operation on 1st September 2005, replacing Community Care Areas (CCAs). LHO population denominators are used in this report rather than CCA population denominators. The LHO rates were calculated using Census 2016 LHO denominator data extracted from the HSE Health Atlas and are not a direct match to the corresponding CCAs.

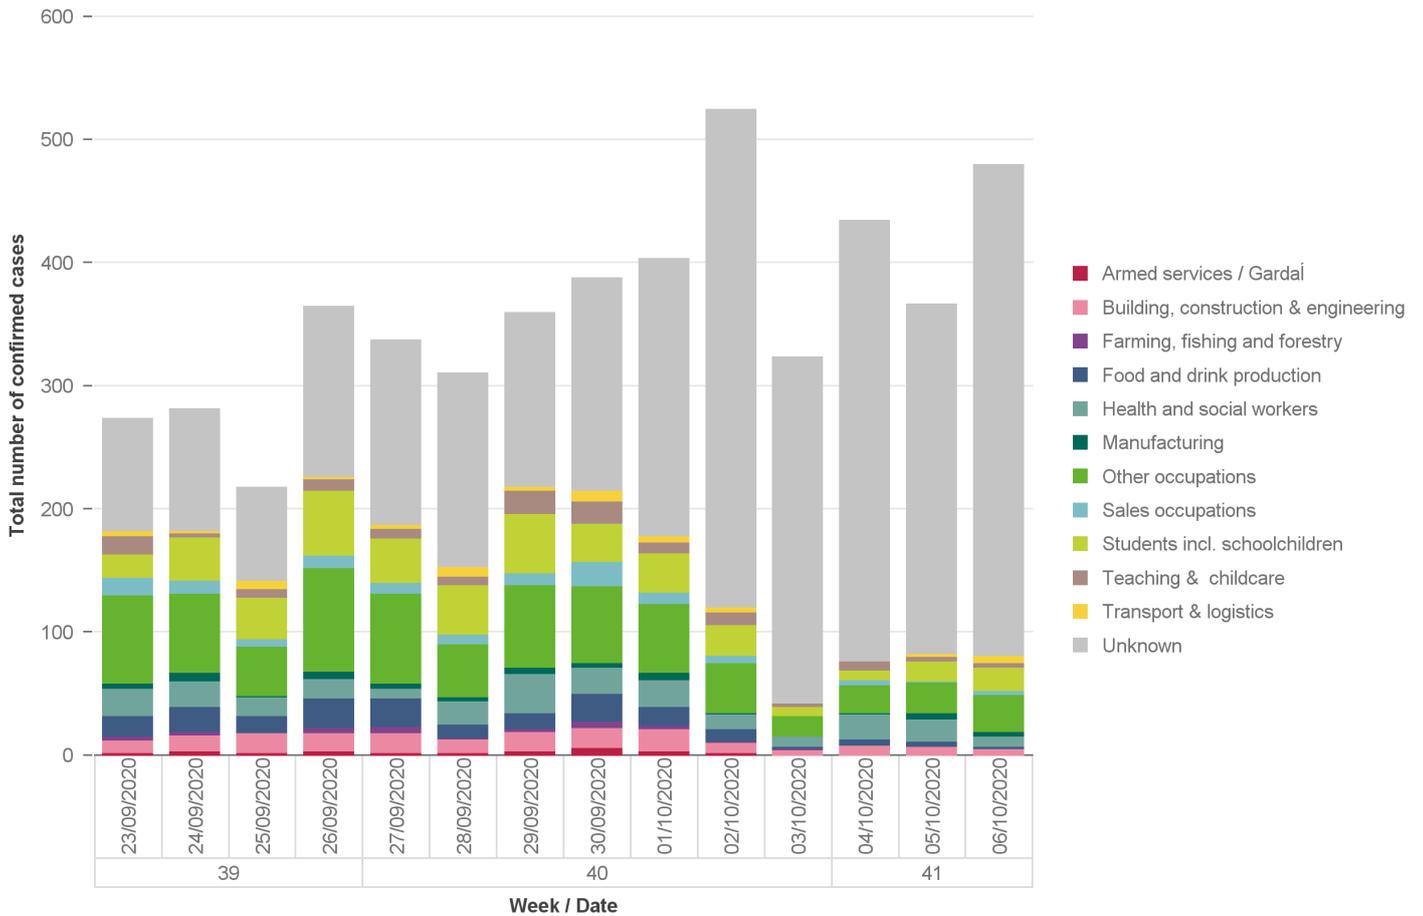

**Table 6: Number of confirmed COVID-19 cases by most likely transmission source notified from 23/09/2020 to midnight 06/10/2020**

Most likely transmission source	Number of cases	Percent
Travel related	85	1.43%
Close contact with a known confirmed case	3,395	57.30%
Healthcare setting acquired: patient	125	2.11%
Healthcare setting acquired: staff	86	1.45%
Community transmission	1,471	24.83%
Under investigation	763	12.88%
<b>Total</b>	<b>5,925</b>	<b>100.00%</b>

\*Travel related cases include cases who acquire COVID-19 infection outside of Ireland (imported cases) and cases who acquire COVID-19 infection directly from imported cases

## Technical Notes

### 1. Data Source

Data are based on statutory notifications and were extracted from Computerised Infectious Disease Reporting (CIDR) system at 13:21 on 07/10/2020. Data are provisional and subject to ongoing review, validation and update. As a result, figures in this report may differ from previously published figures.

### 2. Epidemiological date

Epidemiological date is derived from epidemiological date, which is the earliest of onset date, date of diagnosis, laboratory specimen collection date, laboratory received date, laboratory reported date, event creation/notification date.

### 3. Population data

Population data were taken from Census 2016. Data were aggregated into the following age groups for the analysis: 0-4 years, 5-14 years, 15-24 years, 25-34 years, 35-44 years, 45-54 years, 55-64 years, 65-74 years, 75-84 years and  $\geq 85$  years.

### 3. Transmission classification

Transmission classification is based on country of infection as well as enhanced exposure data (international travel; close contact of a case) recorded in CIDR. Transmission is classified as 'unknown' due to incomplete data on CIDR.

Travel related cases include cases who acquire COVID-19 infection outside of Ireland (imported cases) and cases who acquire COVID-19 infection directly from imported cases.

WHO definition of transmission classification is specified below:

- Community transmission is evidenced by the inability to relate confirmed cases through chains of transmission for a large number of cases, or by increasing positive tests through routine screening of sentinel samples.
- Local transmission indicates locations where the source of infection is within the reporting location.
- Imported cases only indicates locations where all cases have been acquired outside the location of reporting.

### 4. Outbreak location

Where an outbreak location is reported as a residential facility (RF) this includes nursing homes, community hospitals, long-stay units and residential institutions including mental health facilities, prisons and direct provision centres.

Other outbreak location includes community, extended family, hotel, public house, retail outlet, travel related and all other locations.
