

# Epidemiology of COVID-19 in Ireland - 14 day report

Report prepared by HPSC on 06/10/2021

Summary characteristics of confirmed COVID-19 cases notified in Ireland from 22/09/2021 up to midnight on 05/10/2021

	Number	Percent
Total number of confirmed cases	17,268	
National incidence of confirmed cases per 100,000 population	362.6	
Number of cases hospitalised*	321	1.86
Number of cases admitted to ICU*	16	0.09
Males	8,443	48.9
Females	8,801	51.0
M:F ratio	0.96	
Median age (years)	32	
Mean age (years)	34	
Age range (years)	0-103	

Note: This report will not include data on enhanced surveillance information such as most likely source of transmission and travel. These will now be reported on a weekly basis.

Note: Data were extracted from Computerised Infectious Disease Reporting (CIDR) system at 09:00 on 06/10/2021 and are provisional and subject to ongoing review, validation and update. As a result, figures in this report may differ from previously published figures.

<sup>\*</sup> The number of cases hospitalised and admitted to ICU described in the above table relate only to COVID-19 cases who were notified during this reporting period, and where the outcome is known at the time of reporting. It does not reflect all hospitalisations and ICU admissions related to COVID-19 which occurred during the period covered by the report. It also does not reflect the final number of cases hospitalised or admitted to ICU for these cases notified during this period as the outcome may not yet have occurred, or is yet to be notified.

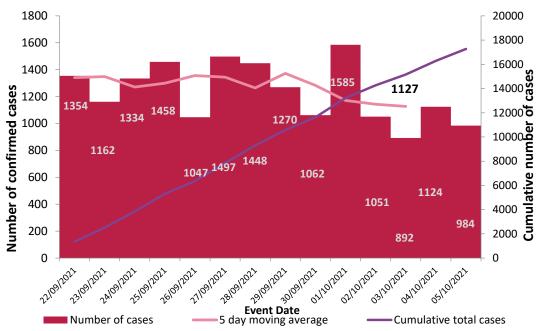

Figure 1a. Daily number\* and cumulative number of confirmed cases of COVID-19, and 5-day moving average, by notification date (n=17268)

<sup>\*</sup>Notifications of COVID-19 cases on CIDR may be reduced at weekends. Cases diagnosed at weekends may be reflected in notifications early the following week.

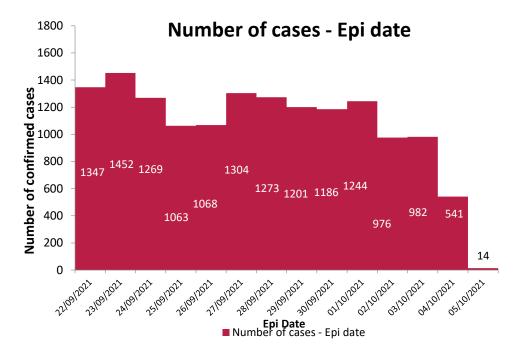

Figure 1b. Daily number of confirmed cases of COVID-19, by epidemiological date\*

<sup>\*</sup>Epidemiological date is based on the earliest of dates available on the case and taken from date of onset of symptoms, date of diagnosis, laboratory specimen collection date, laboratory received date, laboratory reported date or event creation date/notification date on CIDR.

#### **Technical Notes**

#### 1. Data Source

Data are based on statutory notifications and were extracted from Computerised Infectious Disease Reporting (CIDR) system. Data are provisional and subject to ongoing review, validation and update. As a result, figures in this report may differ from previously published figures.

#### 2. Population data

Population data were taken from Census 2016. Data were aggregated into the following age groups for the analysis: 0-4 years, 5-12 years, 13-18 years, 19-24 years, 25-34 years, 35-44 years, 45-54 years, 55-64 years, 65-74 years, 75-84 years and ≥ 85 years.

#### 3. Epidemiological date

The epi-date is the epidemiological date for a case. It is based on the earliest of dates available on the case and taken from date of onset of symptoms, date of diagnosis, laboratory specimen collection date, laboratory received date, laboratory reported date or event creation date/notification date on CIDR. By using this date rather than event creation/ notification date, adjusts for any delays in testing/notification.
