

Weekly report on the epidemiology of COVID-19 in Ireland

Week 12, 2023

- The epidemiological weeks in this report, run from Sunday to Saturday. Please refer to the [HPSC website](#) for a complete list of epidemiological weeks with start and end dates for 2020-2023.
- Data for this report are based on cases notified on the Computerised Infectious Disease Reporting (CIDR) and HSE Positive Antigen Portal up to midnight 25/03/2023. Data were extracted from CIDR system on 28/03/2023. Data are provisional and subject to ongoing review, validation and update. As a result, figures in this report may differ from previously published figures.
- A confirmed case of COVID-19 is any person for whom SARS-CoV-2 is detected by PCR. At present, antigen testing undertaken outside the governance of the public laboratory service is not recognised for the purpose of notification of COVID-19. For surveillance purposes, a self-administered positive antigen test registered on the HSE Antigen Portal is not considered to be a confirmed COVID-19 case as it is not subject to data validation and linkage to previous or subsequent PCR results is not feasible.
- In this report, confirmed cases notified on CIDR and cases who have registered a positive antigen test result on the HSE Antigen Portal are presented separately.
- Data from both sources (CIDR and the HSE Antigen Portal) should be interpreted in the context of the current testing policy. Testing policies can affect the number and age distribution of confirmed cases notified on CIDR. Information on the current testing policy in Ireland can be found [here](#)

Key points

Notified confirmed cases

- In week 12 (between March 19 and March 25 2023) there were 1,286 new confirmed COVID-19 cases reported on CIDR. This is an increase of 69.2% compared to week 11 when there were 760 confirmed COVID-19 cases notified.
- The highest number of new confirmed COVID-19 cases in week 12 was in the age group of 35-44 years with 15.9% of notified cases in week 12.

Laboratory data of SARS-CoV-2 PCR tests

- In week 12, a total of 9,685 SARS-CoV-2 tests were performed, of which 1,341 (13.8%) were positive. This is an increase compared to the previous week, 11, when 11.1% were positive.

Self-reported antigen positive cases

- In week 12, a total of 2,760 positive antigen test results were registered on the HSE Positive Antigen Portal. This is an increase of 48.1% reported results compared to week 11 when 1,863 cases were registered.

Deaths

- Since the start of the pandemic 8,763 COVID-19 deaths among notified COVID-19 cases have been reported on CIDR. Of these, 2 had a date of death in week 12.

Table 1: Summary characteristics of COVID-19 cases notified in Ireland during week 12, 2023 and 2023 to date

	Week 12, 2023		Total 2023	
	Number	Percentage	Number	Percentage
Total number of confirmed cases	1,286		13,482	
Incidence rate of confirmed cases per 100,000 population	27		283.1	
Healthcare workers	116	9.00	1,700	12.61
Healthcare workers where known		18.10		22.11
Severe cases				
Number of cases hospitalised	429*	33.36	4,178*	30.99
Number of cases admitted to ICU	3*	0.23	55*	0.41
Number of deaths among confirmed cases	0*	0.00	198*	1.47

* The number of cases hospitalised, cases admitted to ICU and deaths described in the above table relate only to COVID-19 cases who were notified during this reporting period, and where the outcome is known at the time of reporting. It does not reflect all hospitalisations, ICU admissions and deaths related to COVID-19 which occurred during the period covered by the report. It also does not reflect the final number of cases hospitalised, admitted to ICU or deaths for these cases notified during this period as the outcome may not yet have occurred, or is yet to be notified

Confirmed cases of COVID-19

Since the start of 2023, 13,482 confirmed COVID-19 cases have been notified on CIDR. In the past week, week 12 2023, 1,286 confirmed COVID-19 cases were reported on CIDR. This is an increase of 69.2% compared to week 11 when 760 confirmed COVID-19 cases were notified. Figure 1 shows the epidemiological curve of COVID-19 cases notified in Ireland from week 1 2022 to week 12 2023. Data since the start of the pandemic is available on the [Epidemiology of COVID-19 in Ireland infohub](#).

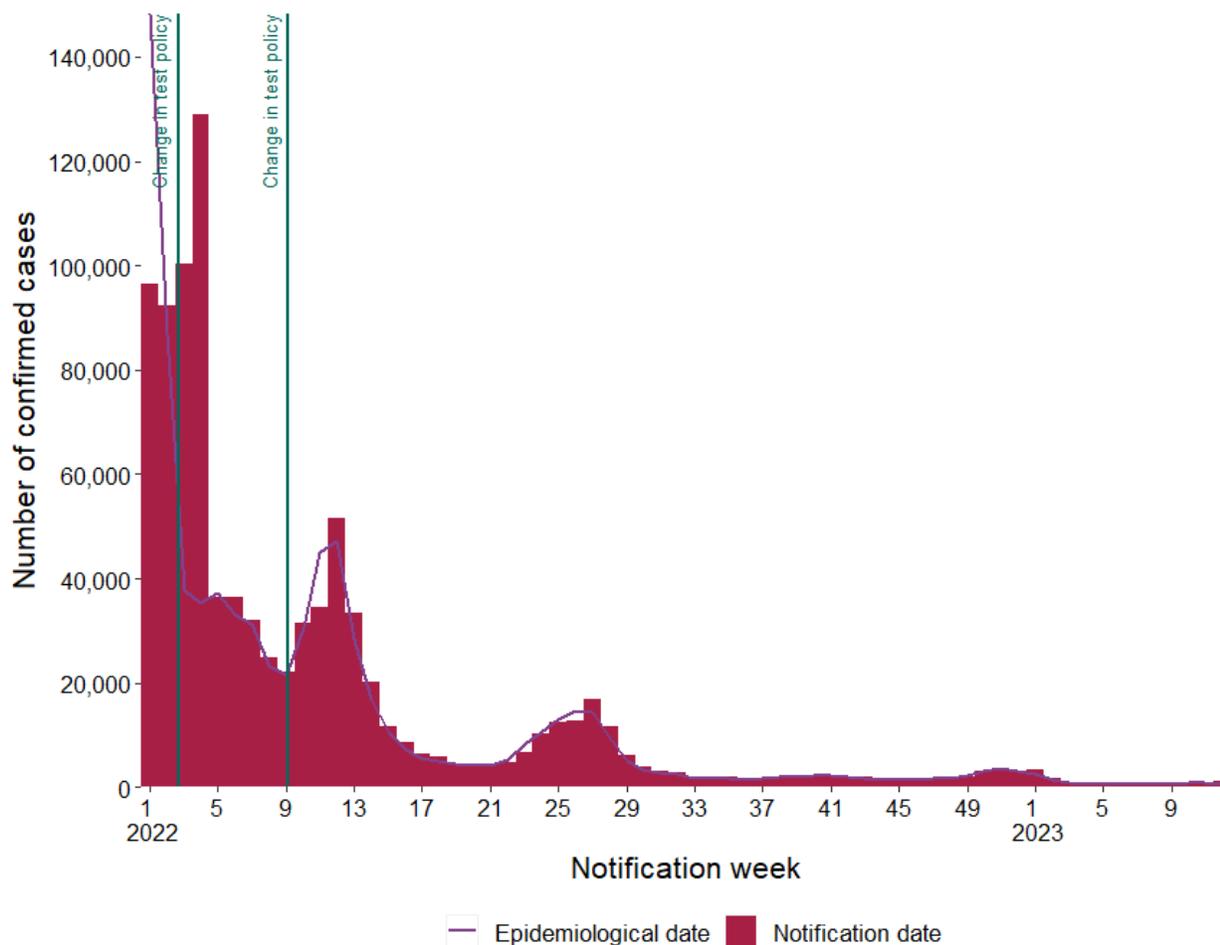

Figure 1a: Number of confirmed COVID-19 cases by notification week and epidemiological date in Ireland between week 1, 2022 and week 12, 2023. The red bars represent the number of confirmed cases by notification date. The purple line represents the number of cases by epidemiological date. The dark blue horizontal lines indicate a change in test policy^{1 2 3}

¹ Since 14/01/2022 (week 2, 2022), a confirmatory PCR test after a positive antigen test was no longer needed for those in the community aged between 4 and 39 years of age outside of a risk group.

² Since 28/02/2022 (week 9, 2022), PCR testing was only needed for symptomatic people in the community within certain risk groups: those who have not had booster vaccination and are aged 55 years and older; those with a high-risk medical conditions; those who are immunocompromised; those who live in the same household as a person who is immunocompromised; those who provide care or support for person they know to be immunocompromised; those who are pregnant; Healthcare Workers.

³ Data for late December 2021 and January 2022 do not accurately reflect trends. Due to a surge in case numbers the turnaround time for processing notifications increased. Notifications between 19/12/2021 and 15/01/2022 (week 51, 2021 to week 2, 2022) are reduced, while notifications between 16/01/2022 and 29/01/2022 (weeks 3 and 4, 2022) are inflated compared to cases diagnosed during these weeks.

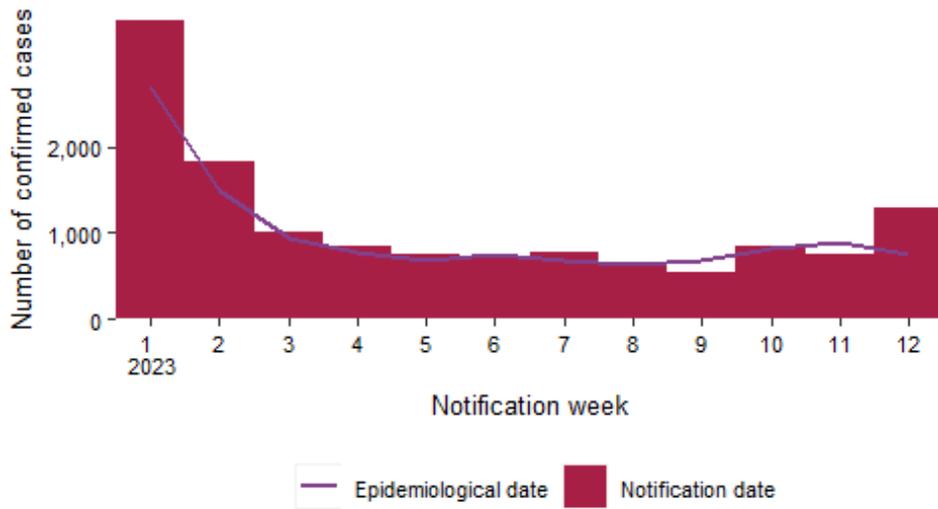

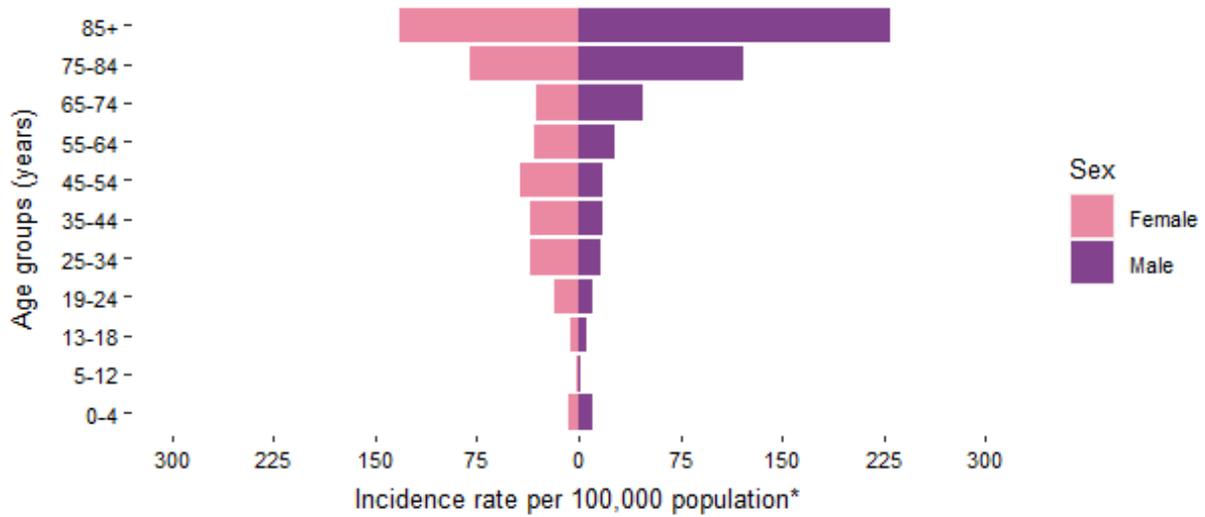

Figure 1b: Number of confirmed COVID-19 cases by notification week and epidemiological date in Ireland in the last 12 weeks. The red bars represent the number of confirmed cases by notification date. The purple line represents the number of cases by epidemiological date.

Confirmed COVID-19 cases by age and sex

Table 2: Summary characteristics by age and sex of COVID-19 cases notified in Ireland during week 12, 2023 and 2023 to date

	Week 12, 2023		Total 2023	
	Number	Percentage	Number	Percentage
Gender				
Males	545	42.4	5,409	40.1
Females	740	57.5	8,072	59.9
M:F ratio	0.74		0.67	
Age (years)				
Mean age	54		53	
Median age	53		52	
Age range	0 - 99		0 - 102	
Age groups (years)				
0-4	31	2.4	388	2.9
5-12	11	0.9	150	1.1
13-18	23	1.8	200	1.5
19-24	48	3.7	569	4.2
25-34	173	13.5	1,703	12.6
35-44	204	15.9	2,147	15.9
45-54	190	14.8	1,995	14.8
55-64	151	11.7	1,721	12.8
65-74	148	11.5	1,447	10.7
75-84	195	15.2	1,826	13.5
85+	112	8.7	1,333	9.9
Unknown	NA	0.0	3	0.0

*Excluding 0 for whom age is unknown, 1 for whom sex is unknown and 0 for whom both are unknown

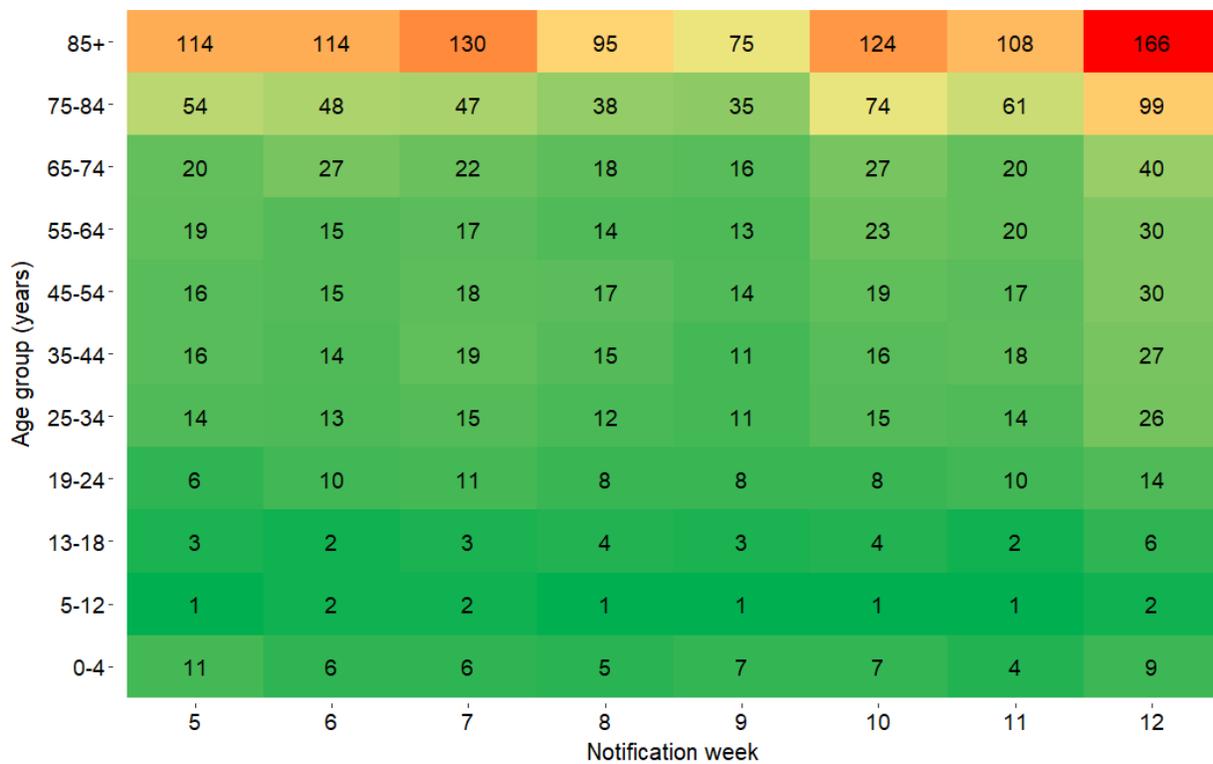

Figure 3: Heat map of weekly age-specific incidence rates of confirmed COVID-19 cases per 100,000 population in Ireland for the last 8 weeks

Cases and incidence by county

Table 3: Characteristics of confirmed COVID-19 cases by county and descending incidence rate per 100,000 notified in Ireland, during week 12, 2023*

County	Number of cases	Percent	Incidence rate per 100,000
Louth	72	5.6	55.9
Offaly	40	3.1	51.3
Leitrim	16	1.2	49.9
Limerick	95	7.4	48.7
Cavan	32	2.5	42.0
Donegal	58	4.5	36.4
Waterford	42	3.3	36.2
Kilkenny	35	2.7	35.3
Laois	29	2.3	34.2
Carlow	18	1.4	31.6
Kildare	70	5.4	31.5
Monaghan	19	1.5	31.0
Wicklow	41	3.2	28.8
Sligo	18	1.4	27.5
Wexford	38	3.0	25.4
Dublin	339	26.4	25.2
Longford	10	0.8	24.5
Clare	28	2.2	23.6
Meath	44	3.4	22.6
Tipperary	36	2.8	22.6
Westmeath	20	1.6	22.5
Kerry	26	2.0	17.6
Roscommon	11	0.9	17.0
Cork	91	7.1	16.8
Galway	43	3.3	16.7
Mayo	15	1.2	11.5

* County data may not be accurately reflected in the most recent week due to ongoing data validations

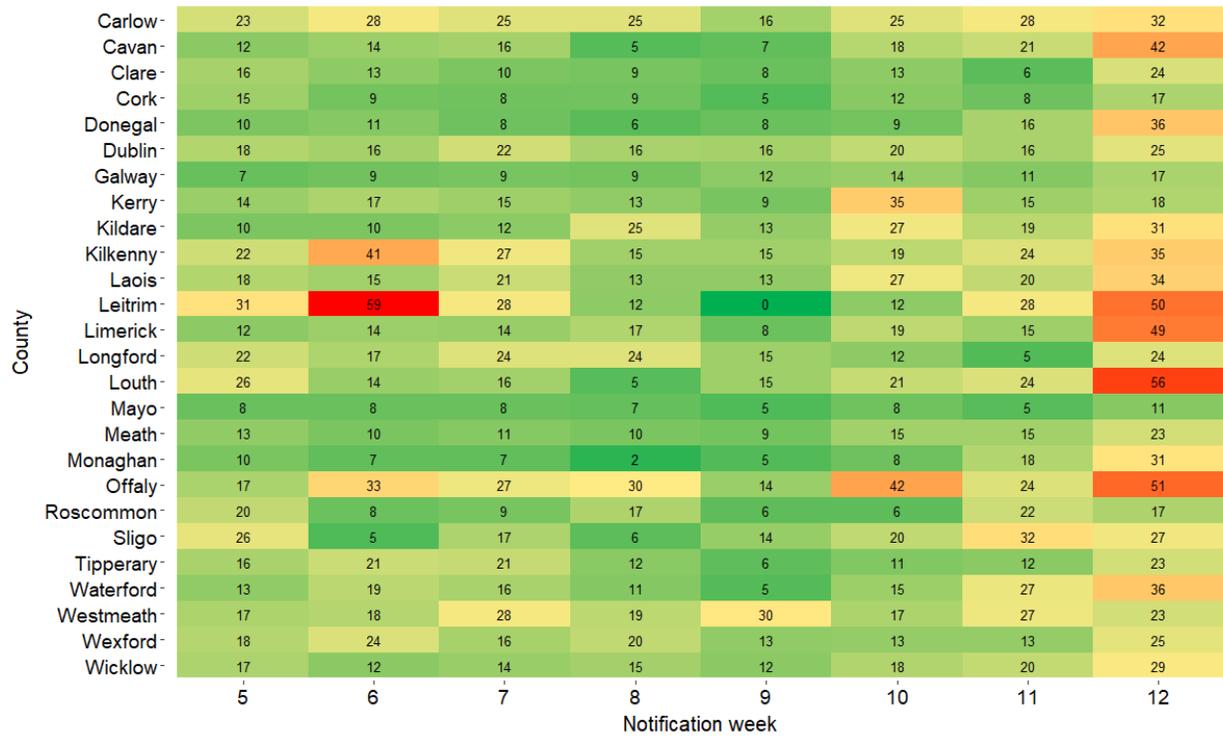

Figure 4: Heat map of weekly incidence rates of confirmed COVID-19 cases per 100,000 population, by county, notified in Ireland for the last 8 weeks

Hospitalisations

A total of 429 hospitalised confirmed COVID-19 cases were recorded in the latest epidemiological week, week 12 2023.

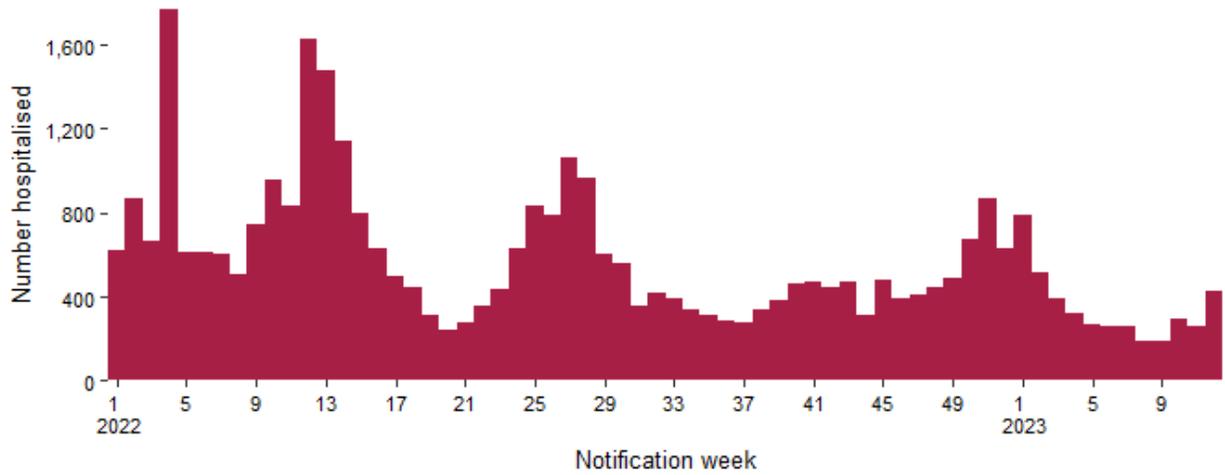

Figure 5: Hospitalisations among confirmed COVID-19 cases notified on CIDR in Ireland between week 1, 2022 and week 12, 2023

Table 4: Number of COVID-19 cases and hospital admissions by age group in Ireland for week⁴ 12, 2023 based on week of notification⁵

Age group	Week 12, 2023			Total 2023		
	Total cases	Hospitalised cases		Total cases	Hospitalised cases	
	Number of cases	Number of cases	Percentage	Number of cases	Number of cases	Percentage
0-4	31	21	67.7	388	211	54.4
5-12	11	6	54.5	150	47	31.3
13-18	23	6	26.1	200	47	23.5
19-24	48	8	16.7	569	82	14.4
25-34	173	12	6.9	1,703	189	11.1
35-44	204	24	11.8	2,147	216	10.1
45-54	190	26	13.7	1,995	268	13.4
55-64	151	36	23.8	1,721	415	24.1
65-74	148	87	58.8	1,447	804	55.6
75-84	195	131	67.2	1,826	1,151	63.0
85+	112	72	64.3	1,333	748	56.1
Unknown	0	0	0.0	3	0	0.0

⁴ Hospitalisations may be underestimated for recent weeks as the outcome may not yet have occurred or may not yet have been reported to CIDR

⁵ Data are based on the date the case was notified on CIDR, and not the date of hospital admission

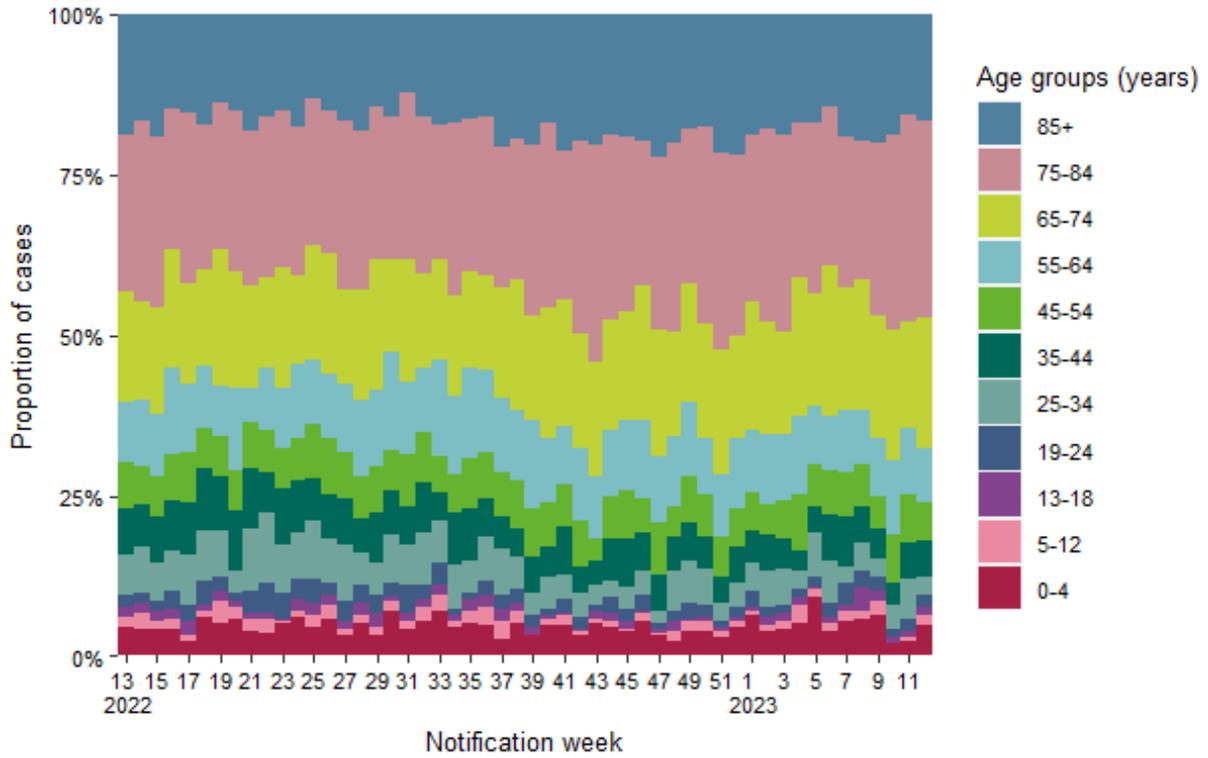

Figure 6: Age distribution of hospitalised confirmed COVID-19 cases notified on CIDR in Ireland between week 13, 2022 and week 12, 2023

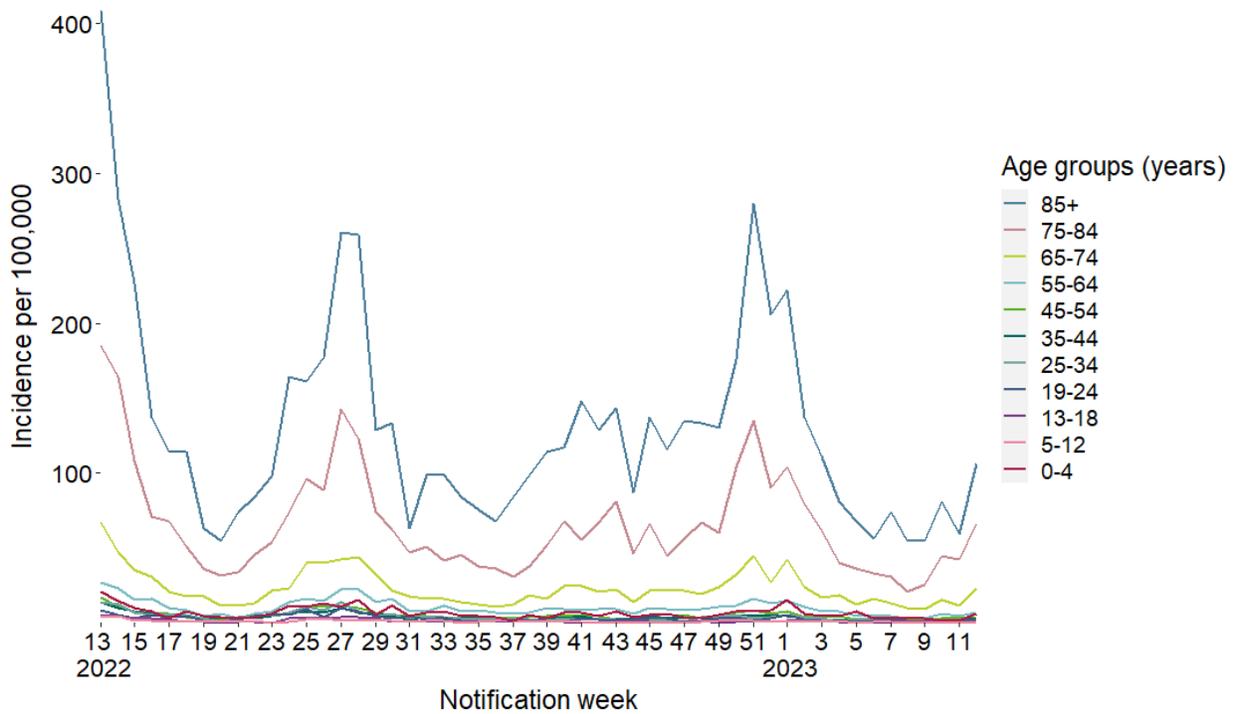

Figure 7: Incidence rate by age group of hospitalisations among confirmed COVID-19 cases on CIDR in Ireland between week 13, 2022 and week 12, 2023

ICU admissions

A total of 3 COVID-19 cases were admitted to ICU in the latest epidemiological week⁶, week 12 2023.

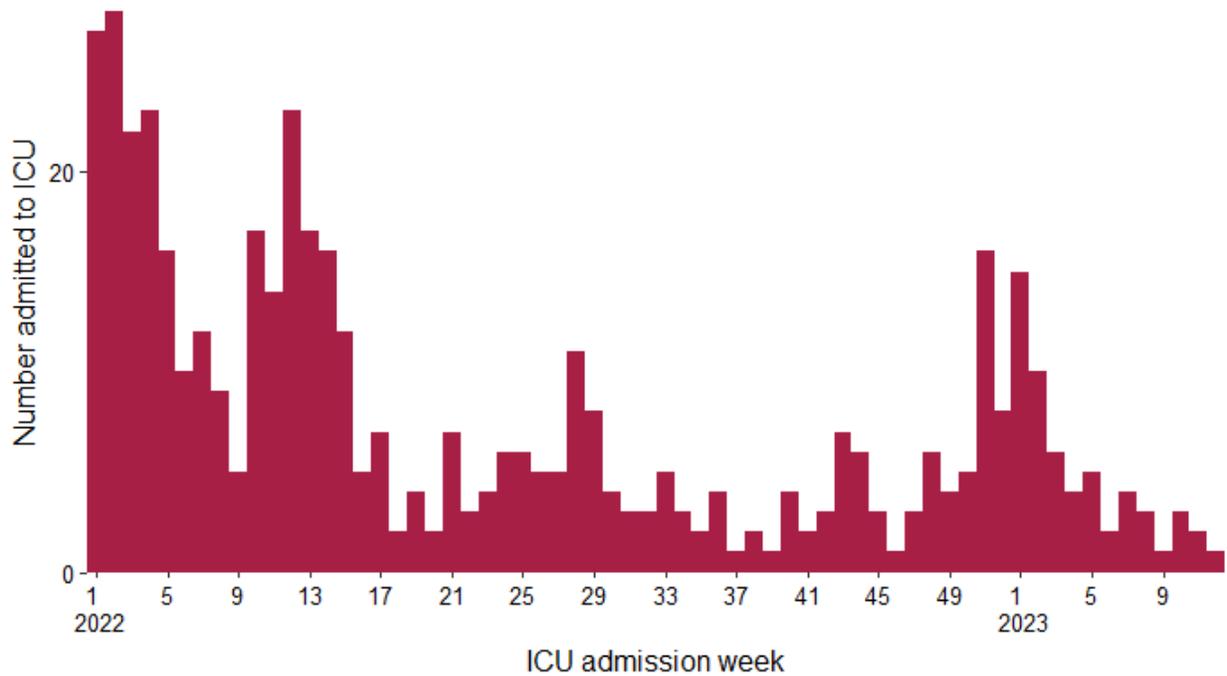

Figure 8: Number of ICU COVID-19 ICU admissions in Ireland by week of ICU admission, between week 1, 2022 and week 12, 2023⁶

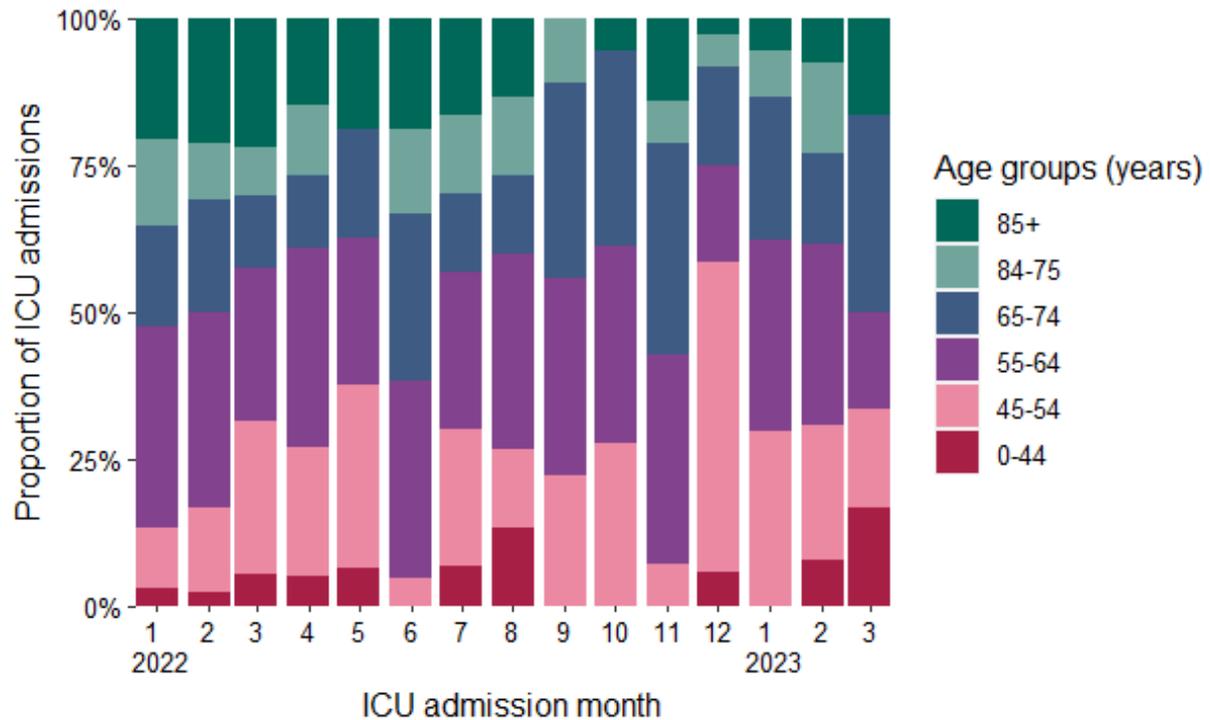

Figure 9: Age distribution of confirmed COVID-19 cases admitted to by month of admission January, 2021 and March, 2023

⁶ Please note that most recent weeks may not yet reflect all admissions

Deaths

Please note the below figures and tables include all cases (confirmed, probable and possible) who have died. A total of 2 cases had a date of death in the latest epidemiological week, 12. The mean and median age of those who died in the previous epidemiological week was 86 and 86 years respectively.

150 -

Figure 11: Age distribution of COVID-19 deaths notified on CIDR in Ireland between January, 2022 and March, 2023

⁷ Please note that most recent weeks may not yet reflect all deaths

Laboratory data of SARS-CoV-2 PCR tests

In week 12, a total of 9,685 SARS-CoV-2 tests were performed, of which 1,341 (13.8%) were positive.

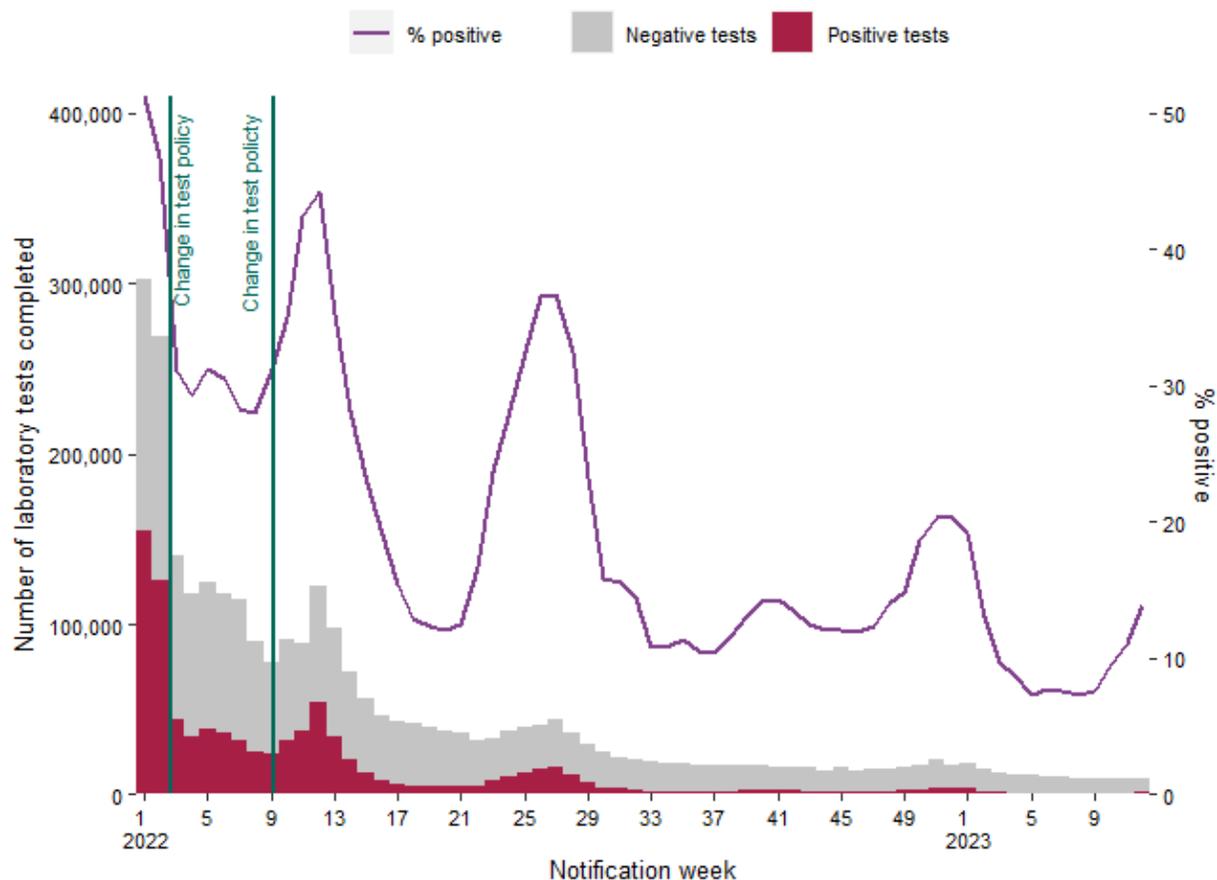

Figure 12: Number of completed laboratory tests by result and % positive tests⁸ in Ireland between week 1, 2022 and week 12, 2023. Data source: Deloitte Ireland LLP^{9, 10}

⁸ Positive tests refer to all positive specimens and includes duplicates and individuals who were retested.

⁹ Since 14/01/2022 (week 2), a confirmatory PCR test after a positive antigen test was no longer needed for those in the community aged between 4 and 39 years of age outside of a risk group.

¹⁰ Since 28/02/2022 (week 9), PCR testing is only needed for symptomatic people in the community within certain risk groups: those who have not had booster vaccination and are aged 55 years and older; those with a high-risk medical conditions; those who are immunocompromised; those who live in the same household as a person who is immunocompromised; those who provide care or support for person they know to be immunocompromised; those who are pregnant; Healthcare Workers.

Self-reported antigen positive cases

The following figures and tables are based on cases who registered a self-administered positive antigen test on the HSE Positive Antigen Portal. They are not considered confirmed cases and have undergone no data validation.

Table 5: Characteristics of COVID-19 cases who registered a positive antigen test to the HSE Positive Antigen Portal

	Week 12, 2023		Total 2023	
	Number	Percentage	Number	Percentage
Total number of registered cases	2,760		27,666	
Incidence rate of registered cases per 100,000 population	58		581	
Gender				
Males	854	30.9	8,909	32.2
Females	1,868	67.7	18,301	66.1
M:F ratio	0.46		0.49	
Age (years)				
Mean age	41		40	
Median age	41		41	
Age range	1 - 84		0 - 101	

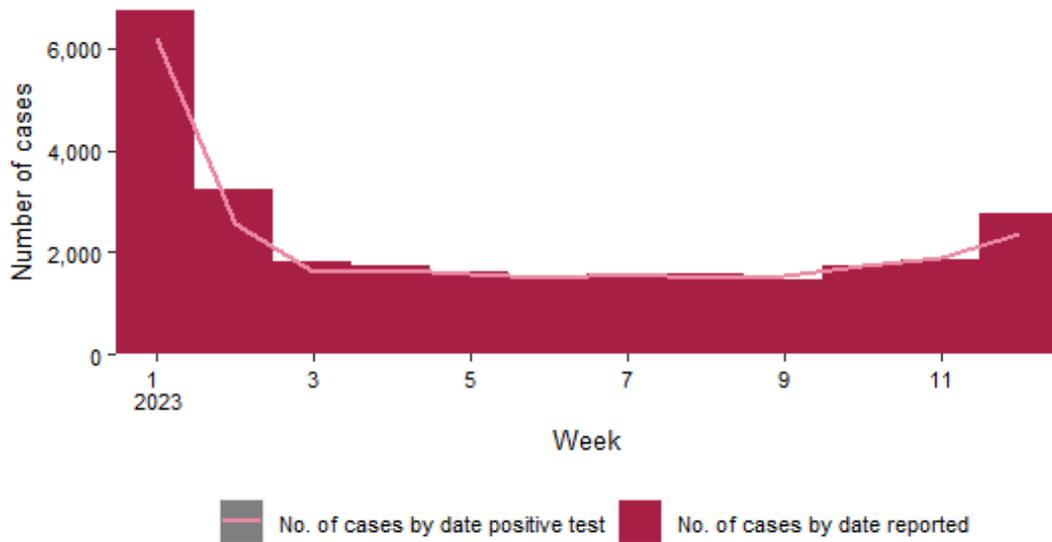

Figure 13: Number of COVID-19 cases who registered a positive antigen test on the HSE Positive Antigen Portal by week of registration¹¹, and week of epidemiological date in Ireland between week 1, 2023 and week 12, 2023¹²

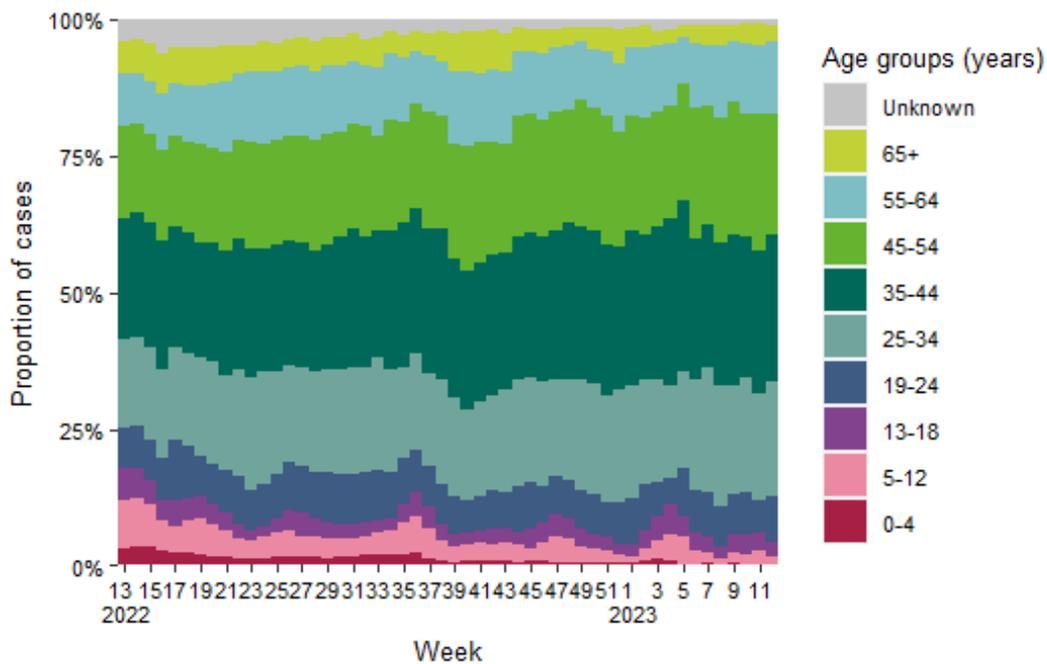

Figure 14: Age distribution of COVID-19 cases who registered a positive antigen test on the HSE Positive Antigen Portal by week of registration¹³ in Ireland between week 2⁸, 2022 and week 12, 2023

¹¹ Reporting to the HSE Positive Antigen Portal commenced on Friday 14th January 2022, and therefore week 2 only includes 2 days.

¹² Some cases reported a date of positive test much earlier than the date it was registered in the portal. Dates of positive test earlier than week 1, 2023 are not shown in the number of case by date of positive test. Dates of positive test which erroneously were reported to be later than the current epi week are excluded.

¹³ Please note, the week of registration on the HSE Positive Antigen Portal may differ from the week the positive test was obtained.

Notes

Technical Notes

1. Data Source

Data are based on statutory notifications and were extracted from Computerised Infectious Disease Reporting (CIDR) system and the HSE COVID care tracker. Data are provisional and subject to ongoing review, validation and update. As a result, figures in this report may differ from previously published figures. Slide with Laboratory testing for SARS-CoV-2 data provided by Deloitte Ireland LLP

2. Epidemiological date

Epidemiological date is based on the earliest of dates available on the case and taken from date of onset of symptoms, date of diagnosis, laboratory specimen collection date, laboratory received date, laboratory reported date or event creation date/notification date on CIDR. By using this date rather than event creation/ notification date, adjusts for any delays in testing/notification. Further information on epidemiological dates and weeks can be found on the [HPSC website](#).

3. Population data

Population data were taken from Census 2016. Data were aggregated into the following age groups for the analysis: 0-4 years, 5-12 years, 13-18 years, 19-24 years, 25-34 years, 35-44 years, 45-54 years, 55-64 years, 65-74 years, 75-84 years and ≥ 85 years.

Acknowledgements

Sincere thanks are extended to all those who are participating in the collection of data and reporting of data used in these reports. This includes the HSE COVID-19 Contact Management Programme (CMP), staff in ICU units, notifying clinicians, laboratory staff, public health doctors, nurses, surveillance scientists, microbiologists and administrative staff.
