

Weekly report on the epidemiology of COVID-19 in Ireland

Week 11, 2024

- The epidemiological weeks in this report, run from Sunday to Saturday. Please refer to the [HPSC website](#) for a complete list of epidemiological weeks with start and end dates for 2023-2024.
- Data for this report are based on cases notified on the Computerised Infectious Disease Reporting (CIDR) up to midnight 16/03/2024. Data were extracted from CIDR system on 19/03/2024. Data are provisional and subject to ongoing review, validation and update. As a result, figures in this report may differ from previously published figures.
- For epidemiological purposes, HPSC reports deaths by date of death, hospitalised cases are reported by date of notification on CIDR and ICU cases are reported by date of admission to ICU.
- Data should be interpreted in the context of the current testing policy. Testing policies can affect the number and age distribution of confirmed cases notified on CIDR. Information on the current testing policy in Ireland can be found [here](#)
- **From week 47, 2023 this report uses population data from Census 2022. Rates may therefore differ from those reported previously which used population data from Census 2016.**

Key points

Notified confirmed cases

- In week 11 (between March 10 and March 16, 2024) there were 168 new confirmed COVID-19 cases reported on CIDR. This is stable (0.6%) compared to week 10 when there were 167 confirmed COVID-19 cases notified.
- The highest number of new confirmed COVID-19 cases in week 11 was in the age group of 75-84 years with 30.4% of notified cases in week 11.

Laboratory data of SARS-CoV-2 tests

- In week 11, a total of 5,024 SARS-CoV-2 laboratory tests were performed, of which 164 (3.3%) were positive. This is a decrease compared to the previous week, 10, when 3.7% were positive.

Deaths

- Since the start of the pandemic 9,704 COVID-19 deaths among notified COVID-19 cases have been reported on CIDR. Of these, 0 had a date of death in week 11.

Severe cases				
Number of cases hospitalised ^{*^}	95	56.55	2,478	42.11
Number of cases admitted to ICU ^{*^}	0		17	
Number of deaths among confirmed cases ^{*^}	0		116	

** HPSC reports deaths by date of death, hospitalised cases are reported by date of notification on CIDR and ICU cases are reported by date of admission to ICU.*

^ The number of cases hospitalised, cases admitted to ICU and deaths described in the above table relate only to COVID-19 cases where the outcome is known at the time of reporting. It does not reflect all hospitalisations, ICU admissions and deaths related to COVID-19 which occurred during the period covered by the report. It also does not reflect the final number of cases hospitalised, admitted to ICU or deaths for these cases notified during this period as the outcome may not have been notified

Confirmed cases of COVID-19

Since the start of 2024, a total of 5,884 confirmed COVID-19 cases have been notified on CIDR. In the past week, week 11 2024, 168 confirmed COVID-19 cases were reported on CIDR. This is an increase of 0.6% compared to week 10 when 167 confirmed COVID-19 cases were notified. Figure 1 shows the epidemiological curve of COVID-19 cases notified in Ireland for the last one year to week 11 2024. Data since the start of the pandemic is available on the [Epidemiology of COVID-19 in Ireland infohub](#).

⁴ Positive tests refer to all positive specimens and includes duplicates and individuals who were retested.

⁵ Since 30/03/2023 (week 13, 2023), community test centres closed and laboratory testing was only performed based on clinical assessment.

Notes

Technical Notes

1. Data Source

Data are based on statutory notifications and were extracted from Computerised Infectious Disease Reporting (CIDR) system and the HSE COVID care tracker. Data are provisional and subject to ongoing review, validation and update. As a result, figures in this report may differ from previously published figures. Slide with Laboratory testing for SARS-CoV-2 data provided by Deloitte Ireland LLP

2. Epidemiological date

Epidemiological date is based on the earliest of dates available on the case and taken from date of onset of symptoms, date of diagnosis, laboratory specimen collection date, laboratory received date, laboratory reported date or event creation date/notification date on CIDR. By using this date rather than event creation/ notification date, adjusts for any delays in testing/notification. Further information on epidemiological dates and weeks can be found on the [HPSC website](#).

3. Population data

Population data were taken from Census 2022. Data were aggregated into the following age groups for the analysis: 0-4 years, 5-12 years, 13-18 years, 19-24 years, 25-34 years, 35-44 years, 45-54 years, 55-64 years, 65-74 years, 75-84 years and ≥ 85 years.
